Nissan Navara D22 2003 Workshop Service Repair Manual The supplemental front air bag system is de- signed to inflate in higher severity frontal colli- sions, although it may inflate if the forces in an- other type of collision are similar to those of a higher severity frontal impact. It may not inflate in certain frontal collisions. Vehicle damage (or lack of it) is not always an indication of proper supple- mental front air bag system operation. King Cab models are equipped with a supple- mental front passenger air bag ON/OFF switch. Because no rear seat exists where a rear facing child restraint can be secured as in other models, the switch is designed to turn OFF the passenger supplemental air bag so that a rear facing child restraint can be used in the front passenger seat. See "Passenger supplemental air bag ON/OFF switch and light" later in this section for details.
